

FAZAL ULLAH KHAN

Cyber Security Analyst | SOC Operations | Incident Response | Digital Forensics | Cloud & Network Security

 Ireland  fazailu.khan@outlook.com  +353 83 169 9220  LinkedIn  GitHub  Medium  fazalullah-khan.github.io

Professional Summary

Cyber Security Analyst and Security Engineer with 13+ years of wider technology operations experience, including recent hands-on work across SIEM, EDR, cloud security, incident investigation, threat hunting, vulnerability assessment, DevSecOps, and security automation. Strong background in log correlation, operational troubleshooting, root cause analysis, and stakeholder communication. Currently preparing for Microsoft SC-200 and experienced with Microsoft Sentinel, Defender XDR, Wazuh, ELK, Splunk, AWS, Azure, Terraform, and practical DFIR workflows.

Professional Experience

Cyber Security Analyst/Security Engineer Jan 2026 - Present
AmaraTech IT Solutions

- Manage and improve security monitoring across Microsoft Sentinel, Defender XDR, Purview, Intune, EDR, and SIEM platforms.
- Build and tune Sentinel analytics rules using KQL to detect failed sign-ins, suspicious PowerShell activity, endpoint alerts, and data loss events.
- Investigate incidents across Defender XDR and Sentinel using endpoint, identity, cloud, and audit log evidence.
- Configure Microsoft Defender for Endpoint onboarding, device security policies, attack surface reduction rules, antivirus policies, and endpoint protection controls.
- Implement Microsoft Purview use cases including sensitivity labels, DLP policies, audit, eDiscovery, insider risk, communication compliance, and records management.
- Create incident response workflows and automation playbooks to support email notifications, faster triage, and better SOC visibility.
- Perform attack simulation and lab testing to validate detections, confirm alert flow, and improve response readiness.
- Analyse security events, identify root cause, document findings, and recommend practical remediation actions.
- Support Azure and Microsoft 365 security improvements covering identity, access control, monitoring, compliance, and secure configuration.
- Perform web application security review and VAPT activities, including AI-assisted analysis for finding prioritisation and reporting.

Cloud Support and Security Engineer Mar 2023 - Dec 2024
Cloud Hight Consulting / Generation Ireland

- Designed secure AWS and Azure infrastructure and supported cloud deployments using Terraform, Ansible, Docker, Kubernetes, Bash, and PowerShell.
- Developed cloud incident response playbooks and investigated anomalous endpoint, application, network, and cloud log activity.
- Embedded DevSecOps controls in delivery workflows through SAST, container scanning, IaC scanning, and DAST practices.
- Designed disaster recovery and resilience architectures using Terraform to support business continuity and secure service restoration.
- Worked with engineering and DevOps stakeholders to improve security posture without losing operational practicality.

Job Target

Target Roles

SOC Analyst
Incident Response Analyst
Cyber Security Analyst
Digital Forensics / DFIR
Network Security Analyst
Cloud Security Analyst
Vulnerability / Pentest Analyst
Information Security Analyst
GRC Analyst

Core Skills

SOC Operations

Incident Response

Threat Hunting

SIEM

EDR

DFIR

Cloud Security

KQL

VAPT

DevSecOps

Security Automation

Certifications

Current and Planned

Microsoft SC-200 Security Operations Analyst - in progress
CompTIA CySA+
CompTIA PenTest+
AWS Certified Cloud Practitioner
Cisco CyberOps - in progress

Education

Degrees

MSc Cyber Security, National College of Ireland
Master of Electrical Engineering, Signal Processing
Bachelor of Electrical Engineering, Telecommunications

Security Tools

SIEM and Security Operations

Microsoft Sentinel, Defender XDR, Splunk, Wazuh, ELK, Suricata, Snort, Wireshark

Vulnerability, DFIR and Testing

Nmap, Metasploit, Burp Suite, Hashcat, FTK Imager, Autopsy, Volatility, sandbox analysis workflows

Cloud and Automation

AWS, Azure, Terraform, Ansible, CloudFormation, Docker, Kubernetes, Python, Bash, PowerShell

Cybersecurity Research, SOC and Investigation Projects

2025 - 2026

National College of Ireland

- Conduct practical work across SOC monitoring, threat hunting, malware analysis, memory forensics, vulnerability assessment, and security reporting.
- Use Sentinel, Defender XDR, Splunk, Wazuh, ELK, Wireshark, Suricata, and Snort in monitoring and investigation scenarios.
- Automate selected triage and reporting activities using security automation workflows and scripting.

Network Operations and Security Enablement Foundation

2008 - 2023

Nokia, Huawei, TiGO/Millicom, ZTE and Partner Engagements

- Built deep experience in high-availability network operations, SLA-based incident handling, technical escalation, multi-source troubleshooting, and customer-facing issue management.
- Worked in multi-vendor telecom environments with continuous monitoring, performance analysis, documentation, and problem resolution across large operational systems.
- This foundation supports strong incident response discipline, network security thinking, detection reasoning, and structured communication in cybersecurity roles.

Selected Security Projects

Behavioural Anomaly Detection for Cybersecurity Using the BETH Dataset

Isolation Forest + AWS SIEM Integration

- Designed an AWS security analytics architecture that applies unsupervised anomaly scoring and integrates scored outputs into incident visibility and alerting workflows.

AWS-Based Secure WordPress Deployment

Hardening, Monitoring and Vulnerability Mitigation

- Completed a cloud security project focused on secure deployment, hardening decisions, vulnerability mitigation, and practical monitoring considerations.

SOC Home Lab, Wazuh SIEM and Investigation Scenarios

Detection Engineering and Response Practice

- Built monitoring scenarios covering file integrity monitoring, brute-force detection, malware visibility, security automation, and analyst investigation steps.

Digital Forensics and Malware Analysis Exercises

Disk, Memory, Mobile and Network Evidence Workflows

- Performed structured forensic and malware investigations using FTK Imager, Autopsy, Volatility, Wireshark, and related analysis tooling.

Microsoft Security Lab Focus

SC-200 Practical Work

Sentinel analytics rules
KQL detection tuning
Defender XDR investigation
Endpoint onboarding
Purview DLP and eDiscovery
Insider risk and compliance
Intune endpoint security
Automation playbooks

Additional Details

Work Permission and Languages

Full Irish work permission
Open to remote, hybrid and onsite roles
Languages: English, Urdu/Hindi
