

FAZAL ULLAH KHAN

PORTFOLIO

Cyber Security Analyst | Cloud Security Engineer | SOC Analyst | Cloud Administrator & Infrastructure Automation Engineer

Securing cloud and enterprise systems through detection, response, and automation

PROFESSIONAL PROFILE

I am a senior technology professional with 13+ years of progressive experience (2011–Present) spanning telecommunications network operations, multi-country technical consulting, cloud infrastructure engineering, and cybersecurity. My career is not a pivot, but a deliberate evolution from operating and securing mission critical telco networks across multiple countries, to designing and defending cloud-native and enterprise security environments.

This background enables me to approach cybersecurity and cloud engineering with a production first, reliability driven, and risk aware mindset , a perspective typically developed only in high availability telecom and carrier grade environments.

CAREER EVOLUTION & CORE VALUE

From Telco Networks → Cloud → Cybersecurity

Telecom Foundation (Nokia – UAE): Built deep expertise in large-scale, mission-critical network operations, incident handling, SLA-driven environments, and security enablement.

Cloud Infrastructure & Automation: Transitioned into cloud engineering, designing **highly available, secure AWS architectures** using **Terraform and Ansible**.

Cybersecurity & DevSecOps: Advanced into SOC operations, threat hunting, cloud security, and DevSecOps, integrating **SAST, DAST, and infrastructure security controls** into CI/CD pipelines.

This progression allows me to understand **security holistically** — across networks, systems, cloud platforms, and applications.

I bring production-grade security thinking, not just theoretical or lab-based experience

PROFESSIONAL EXPERIENCE

Telco Network Operations & Security Consulting (2011–2023)

Nokia & Partner Engagements | Multi-Country Consulting (Middle East, APAC, Global)

Over **12 years** in telecom network operations and security enablement roles, I worked in **carrier-grade environments** where downtime, misconfiguration, or security failure had national and enterprise-level impact.

Key Responsibilities & Achievements

- Operated and secured **large-scale telecom networks** supporting millions of subscribers.
- Served as **TSRM Security Enablement Specialist**, embedding security into operational workflows.
- Member of **Internal Security Incident Response Teams**, handling high-severity incidents under strict SLAs.
- Performed **cross-domain investigations** by correlating logs from network, system, and security platforms.
- Worked as a **technical consultant across multiple countries**, collaborating with vendors, operators, and internal stakeholders.
- Authored and refined **operational procedures, security documentation, and escalation playbooks**.
- Identified automation and tuning opportunities to reduce analyst workload and improve MTTR by optimising escalation workflows.

Cyber & Cloud Relevance

This phase built my strengths in **incident response, threat detection, root-cause analysis, operational resilience, access control, logging, and governance** - core competencies directly transferable to SOC, cloud security, network security operations roles.

PROFESSIONAL EXPERIENCE

Cloud Infrastructure Engineering & Automation

Cloud Administration & Support Engineer — Generation Ireland

Mar 2023 – Dec 2023

- Designed and provisioned **secure AWS infrastructure** using **Terraform and Ansible (IaC)**.
- Architected **high-availability and disaster recovery solutions (targeting uptime 99.9%)**.
- Built centralised logging, data ingestion pipelines, and monitoring architectures.
- Automated operations using **Bash, PowerShell, Docker, and Kubernetes**.

Value Added

Applied telecom-grade reliability principles to cloud environments, ensuring **fault tolerance, scalability, and security-by-design**.

PROFESSIONAL EXPERIENCE

Cloud Support & Security Engineer — *Cloudhight Consulting*

Mar 2024 – Dec 2024

- Integrated security throughout the **SDLC** in collaboration with DevOps teams.
- Implemented **DevSecOps pipelines** incorporating:
 - **SAST**: SonarQube
 - **Container & IaC Scanning**: Trivy
 - **DAST**: OWASP ZAP
- Designed **cloud incident response playbooks** aligned with real-world attack scenarios.
- Built **Terraform-based disaster recovery architectures**.
- Investigated anomalous endpoint, network, and application logs.

Value Added

Bridged **cloud engineering and security**, ensuring infrastructure is not only functional, but continuously assessed and defended.

PROFESSIONAL EXPERIENCE

Cyber Security & SOC Operations

MSc Cyber Security — National College of Ireland

Jan 2025 – Dec 2026

- Hands-on, practitioner-focused training in modern security operations:
- SOC monitoring using **Splunk, Wazuh, ELK, Microsoft Sentinel & Defender XDR**.
- **Threat hunting, malware analysis, and memory forensics**.
- Reduced false positives by tuning SIEM rules (Splunk / Wazuh / Sentinel) through proactive threat hunting
- Vulnerability assessment, pentesting simulations, and compliance validation.
- Automated incident triage and reporting using **n8n and scripting**.
- Alignment with **GDPR, ISO 27001, PCI-DSS** requirements.

PROFESSIONAL EXPERIENCE

Lead Cyber Security Analyst - *AmaraTech IT Solutions*

Jan 2026 – Present

- Managed and improved SIEM (Wazuh/ELK), EDR, and security tooling to increase detection accuracy and reduce false positives
- Monitored and analysed security events, converting incident findings into improved rules, controls, and configurations
- Strengthened cloud and enterprise security (AWS/Azure, IAM, network controls) to improve control coverage and effectiveness
- Designed and tested attack simulations and sandboxed lab environments to identify gaps and enhance detection and response capability
- Worked closely with SOC and engineering teams to optimise tooling, standardise configurations, and support security governance
- Continuous web application VAPT incorporating AI/ML tools , in machine LAMA models
- Integrated threat intelligence feeds (malicious IPs, domains) into detection systems
- Investigated security incidents using logs, endpoint data, network traffic and root cause analysis and recommended remediation actions

Value Added

Enhanced overall security posture by improving tooling effectiveness, detection coverage, and incident response processes across cloud and enterprise environments.

EDUCATION

- **MSc in Cyber Security** - National College of Ireland (Ireland)
- **Bachelor's in Electrical Engineering** - National University of Modern Languages & Sciences (Pakistan)
- **Master of Electrical Engineering (Signal Processing)** - Blekinge Institute of technology (Sweden)

Education Value: Strong grounding in **engineering, systems thinking, risk analysis, and security architecture.**

CERTIFICATIONS

- CompTIA CySA+ (Cybersecurity Analyst)
- CompTIA PenTest+
- AWS Certified Cloud Practitioner
- AWS SysOps Administrator (Training)
- Cisco CyberOps (In Progress)
- Google Project Management
- ITSOLERA Cyber Security Ambassador

Certification Value: Validates skills across **SOC operations, cloud security, penetration testing, governance, and operational excellence.**

KEY TECHNICAL SKILLS

Cybersecurity

- SOC Analysis, Threat Hunting, Incident Response
- Digital Forensics & Malware Analysis
- Vulnerability Management & Penetration Testing
- Risk Management & Compliance

Cloud & Infrastructure

- AWS & Azure Architecture
- High Availability & Disaster Recovery Design
- Secure Networking & IAM

DevSecOps & Automation

- **IaC:** Terraform, Ansible, CloudFormation
- **CI/CD Security:** SonarQube (SAST), Trivy (Container Scanning), OWASP ZAP (DAST)
- Docker, Kubernetes, Bash, PowerShell, Python

KEY PROJECTS & PRACTICAL IMPACT

- ❑ SOC Home Lab: Integrated SIEM, DFIR, and SOAR tooling for automated detection and response.
- ❑ Wazuh SIEM Deployment: FIM, brute-force detection, malware analysis, and vulnerability monitoring.
- ❑ Disaster Recovery Architecture: Automated failover and resilience using Terraform.
- ❑ AI-based DDoS Detection: Applied ML techniques to detect and analyze attacks.
- ❑ Digital Forensics: Investigations using FTK, Autopsy, Volatility, and mobile forensics tools.

WHAT I BRING TO ORGANIZATIONS

- ❖ Ability to design, implement, automate, and secure infrastructure end-to-end.
- ❖ Strong blend of telecom discipline, cloud engineering, and cybersecurity expertise.
- ❖ Proven capability to embed DevSecOps practices into real-world production environments.
- ❖ Analytical, dependable, and security-first mindset aligned with enterprise and consulting environments.

Let's build secure, resilient, and future-ready systems together.

THANK YOU

PROJECT SUMMARY

AWS RE/START Program

60+ LAB 5 Projects 200 AWS services

400+ hours intensive training 20+ Soft Skills Sessions

AWS Certification

KodeKloud DevOps/DevsecOps

50+ LAB 20 DevOps Tools Hours intensive training

Virtual internships and Projects on Cloud Native Infrastructure Mitigation

Cloud Height Consulting

Customer prod projects Cloud Native solution Implementation Automations

Cloud Security /BCP/SaaS Project implementation Continuous learning and Development

WazuhGuardix Internship

OS Sandbox Wazuh SIEM Integration 10+ SIEM Scenarios

Sec Automation via n8n SIEM SOAR integration

CISCO Cyber Ops Program (on going)

100+ Projects Sec Simulation Packet Trace Activity Task Presentations

MS Research Projects

3 Digital Forensics 2 Malware Analysis 5 Ethical Hacking

5+ Security 10+ crypto/Block chain 2+ Cyber Sec AI/ML

10+ Misc
