

FAZAL ULLAH KHAN

Cyber Security Analyst | SOC | Incident Response | Digital Forensics | Network & Cloud Security

Ireland | fazleejan@gmail.com | +353 83 169 9220 | [LinkedIn](#) | [GitHub](#) | [Medium](#)

Open to Cybersecurity Jobs, Internships, Apprenticeships, and MSc Final-Year Thesis Practicum

PROFESSIONAL PROFILE

Cybersecurity, cloud, and infrastructure professional with 13+ years of technology experience, including carrier-grade telecom operations, cloud security engineering, SOC monitoring, incident response, threat hunting, digital forensics, vulnerability assessment, and security automation. Current work focuses on security engineering, detection improvement, cloud and enterprise controls, attack simulations, and incident investigations. Strong practical foundation supported by an MSc in Cyber Security, CompTIA CySA+ and PenTest+ training, AWS cloud capability, and current preparation for Microsoft SC-200 Security Operations Analyst.

TARGET OPPORTUNITIES

SOC Analyst / Security Monitoring	Incident Response / DFIR	Penetration Testing / VAPT
Cyber Security Analyst	Network Security / Cloud Security	GRC / Information Security
Internship / Apprenticeship	MSc Thesis Practicum	Security Research Projects

CORE STRENGTHS

Security Operations: SIEM monitoring, alert triage, incident escalation, rule tuning, log correlation, threat hunting, IOC handling, root cause analysis

Incident Response and DFIR: investigation workflows, malware behaviour review, endpoint/network evidence analysis, memory and disk forensics, documentation

Offensive Security: web application testing, vulnerability assessment, enumeration, common attack simulation, remediation validation

Cloud and Network Security: AWS, Azure, IAM, secure networking, monitoring, hardening, disaster recovery, telecom and enterprise network operations

Governance and Compliance: GDPR, ISO 27001 and PCI-DSS awareness, security procedures, evidence-led reporting, operational playbooks

PROFESSIONAL EXPERIENCE

Lead Cyber Security Analyst / Security Engineer | *Amara Tech IT Solutions* | Jan 2026 - Present

- Manage and improve SIEM, EDR, and security monitoring capabilities using Wazuh/ELK and related tooling to strengthen detection quality and reduce noisy alerts.
- Investigate security events using endpoint, cloud, applications, network, and log evidence; document root cause, impact, and remediation recommendations.
- Strengthen AWS/Azure and enterprise security through IAM review, network controls, monitoring improvements, and secure configuration guidance.
- Design and test-controlled attack simulations and sandbox lab scenarios to identify detection gaps and improve response workflows.
- Support threat intelligence integration for malicious IPs, domains, and related indicators in detection environments.
- Contribute to continuous web application vulnerability assessment and security testing, including responsible use of AI/ML-assisted analysis tools.

Cloud Support and Security Engineer | *Cloud Hight Consulting / Generation Ireland* | Mar 2023 - Dec 2024

- Designed and supported secure AWS and Azure infrastructure using Terraform, Ansible, Docker, Kubernetes, Bash, and PowerShell.
- Built cloud incident response playbooks and analysed anomalous endpoint, network, application, and cloud log activity.
- Integrated security controls into DevSecOps pipelines using SAST, container/IaC scanning, and DAST practices.
- Designed Terraform-based disaster recovery and resilience patterns with strong focus on availability, monitoring, and continuity.
- Supported secure SaaS and cloud-native deployments, balancing reliability, operational needs, and security controls.

Cybersecurity Student SOC Community / MSc Security Projects | *National College of Ireland* | 2025 - 2026

- Develop hands-on SOC, incident response, threat hunting, malware analysis, network security, and digital forensic workflows through advanced practical projects.
- Work with Microsoft Sentinel, Defender XDR, Splunk, Wazuh, ELK, Suricata, Snort, and Wireshark across monitoring and investigation scenarios.
- Automate triage and reporting workflows using scripting and security automation tools.

Earlier Telecom Network Operations and Security Enablement Experience | *Nokia, Huawei, TiGO/Millicom, ZTE and Partner Engagements* | 2008 - 2023

- Built a strong operational foundation in high-availability telecom environments, including incident handling, escalation, log-based troubleshooting, service quality analysis, and technical documentation.
- Worked across multi-vendor and multi-country network operations with exposure to LTE, VoLTE, 5G NR, capacity analysis, performance KPIs, and service-impacting investigations.
- Developed a disciplined, SLA-driven approach that now supports strong security monitoring, root cause analysis, and incident response work.

SELECTED CYBERSECURITY AND CLOUD PROJECTS

Behavioural Anomaly Detection for Cybersecurity Using the BETH Dataset | *Unsupervised Isolation Forest Approach with AWS SIEM Integration*

- Designed an AWS-based security analytics pipeline that ingests events, scores anomalies using a deployed Isolation Forest model, stores curated outputs, and supports incident visibility through security findings and alerting components.
- Project demonstrates applied skills in SIEM design, ML-supported detection, event pipelines, AWS architecture, serverless processing, incident storage, and security reporting.

AWS-Based Secure WordPress Deployment | *Vulnerability Mitigation via Hardening and Monitoring*

- Built a security-focused WordPress cloud deployment project covering infrastructure hardening, vulnerability reduction, monitoring awareness, and practical remediation thinking.

SOC Home Lab and Wazuh Detection Engineering | *SIEM, FIM, brute-force and malware monitoring*

- Implemented security monitoring scenarios across Wazuh, Suricata/Snort-style network evidence, file integrity monitoring, brute-force detection, and investigation playbooks.

Digital Forensics, Malware and Network Analysis | *Academic and practical security investigations*

- Performed forensic and malware analysis exercises using tools such as FTK Imager, Autopsy, Volatility, Wireshark, and sandbox workflows to understand evidence, behaviour, and remediation paths.

EDUCATION AND CERTIFICATIONS

Education: MSc Cyber Security, National College of Ireland, Ireland | Master of Electrical Engineering, Signal Processing, Blekinge Institute of Technology, Sweden | Bachelor of Electrical Engineering, Telecommunications

Certifications and Training: Microsoft SC-200 Security Operations Analyst - in progress | CompTIA CySA+ | CompTIA PenTest+ | AWS Certified Cloud Practitioner | Cisco CyberOps - in progress | Google Project Management

TECHNICAL TOOLKIT

Security Platforms: Microsoft Sentinel, Defender XDR, Splunk, Wazuh, ELK, Suricata, Snort, Wireshark

Security Testing and DFIR: Nmap, Metasploit, Burp Suite, Hashcat, FTK Imager, Autopsy, Volatility, Cuckoo/Sandbox workflows, ALEAPP, ILEAPP

Cloud, Infrastructure and Automation: AWS, Azure, Terraform, Ansible, CloudFormation, Docker, Kubernetes, Python, Bash, PowerShell

Additional: Full Irish work permission | Open to remote, hybrid and onsite opportunities | Languages: English, Urdu/Hindi
